

The Everything Project

Proposed Programs of The Everything Project

Trailer homes and parks

Prefabricated trailer homes designed for ease of shipment and assembly (non-toxic components. we don't want poisonous/costic materials) can be utilized in an ideal location like the undeveloped land of North Gisenyi just east of the airport and straddling the Congo border would be ideal. We will need to at least receive permission or lease from the Rwandan government for this location but would strongly reinforce our international status for any potential aggressors. And, those in the program and those who earned a trailer working for us can always drive their home off at some later date.

Farms and Sustainable Villages

The isle of Idjwi is the ideal first site for the initial implementation of our dream. I have mentioned Idjwi and West Gisenyi because they seem ideal in tandem for security and demographic need, but wherever there is this need we shall try to put such programs in place. On Idjwi We would need at least two hospitals. One between the North and center and one between the South and center with an airfield and possibly also triage unit in the center. we could build "traditional farm homes with two levels above and a garden level with root cellar and duct for "Roman" cooling and food stores before and where we do not have electricity or refrigeration. solar and hydroelectric power would be a good place to start on Idjwi while solar and diesel generator power would do well in North Goma/Gisenyi until we could connect to and assist the grid as it may exist already.

Import and Sale of Used Cars and Parts : The ETP will create a business arm to sell and service cars and trucks and employ parts sales and mechanics. With safety and the road conditions we can help mobilize and empower people of Greater Kivu with affordable transportation

Filling Stations and Intracontinental Petro Import: The ETP will run good ol' fashioned service stations with petroli, tow service, parts and more

Bathrooms, Outhouses, and Responsibility of the Water Table

SANITATION AND SAFETY ARE A MAJOR PART OF THIS PROJECT. Be it the pathogen from improperly disposed sewage, harmful forces, or even lac overturns, and then don't forget the damn mosquito. Human attack is not likely with the banners we will be flying and by utilizing the Rwanda site and island fortress of Idjwi in tandem, evacuation/ defense plans and implementation can be easily established. the malaria spreading mosquito needs to have its populations decimated.

Farmers, Orphans, and Student Corp.

I have mentioned the "sweat equity" work corp. but this is not a quick photo opportunity. we are going to be living and working with these people. We also need a "home" corp. for education and community

The Everything Project on Facebook and <http://www.gofundme.com/24qr2w> Michael Shaughnessey at

mikshaughnessey@yahoo.com 1(845)633-3959. Future Programs can include telecommunications, radio stations, amusement park, coltan "tantalite" trade, film production, restaurant and tourism. And more, so much more:)
